Subject Index

Aircraft Technology, Conventional, STOL/VTOL

Aerodynamics

Navier-Stokes Solution for a Complete Re-Entry Configuration C86-139
Circulation Control Airfoils as Applied to Rotary-Wing Aircraft C86-137
ADAM, An Aeroservoelastic Analysis Method for Analog or Digital Systems C86-135
Measurement and Prediction of Model-Rotor Flowfields C86-134
Transonic Separated Solutions for an Augmentor Wing C86-133
Nonlinear Aerodynamics of a Two-Dimensional Membrane Airfoil with Separation C86-132
Density Stratification Effects on Wake Vortex Decay C86-130
Self-Induced Roll Oscillations Measured on a Delta Wing/Canard Configuration C86-129
Performance Augmentation of a 60-Degree Delta Aircraft Configuration by Spanwise Blowing C86-127
Experimental Investigation of Apex Fence Flaps on Delta Wings C86-124
Aerodynamic Design Considerations for Efficient High-Lift Supersonic Wings C86-123
Method for Designing Closed Airfoils for Arbitrary Supercritical Speed Distributions C86-122
Aerodynamic Tradeoff Study of Conventional, Canard, and Trisurface Aircraft Systems C86-121
Unsteady Loading on Airfoil Due to Vortices Released Intermittently from Its Surface C86-118
Lower-Side Normal Force Characteristics of Delta Wings at Supersonic Speeds C86-115
Aerodynamic Force Calculations of an Elliptical Circulation Control Airfoil C86-103
Body of Revolution Comparisons for Axial- and Surface-Singularity Distributions C86-102
Unsteady Transonics of a Wing With Tip Store C86-101
Further Development of the Influence Function Method for Store Aerodynamic Analysis C86-100
Aerodynamic Anomalies: Can CFD Prevent or Correct Them? C86-098
Unsteady Aerodynamic Modeling of a Fighter Wing in Transonic Flow C86-094
Pressure Loading on Curved Leading Edge Wings in Supersonic Flow C86-087
Propeller-Wing Integration for Minimum Induced Loss C86-085
Unsteady Flow Around an Ogive Cylinder C86-079
A Forward-Swept-Wing Fighter Configuration Designed by a Transonic Computational Method C86-077
Wake Hazard Alleviation Associated with Roll Oscillations of Wake-Generating Aircraft C86-074
Application of Continuous Vorticity Panels to General Unsteady Incompressible Two-Dimensional Lifting Flows C86-071
Canard/Tail Comparison for an Advanced Variable-Sweep-Wing Fighter C86-069
Dual-Wing Systems with Decalage Angle Optimization C86-068
Aerodynamic Investigations Toward an Adaptive Airfoil for a Transonic Transport Aircraft C86-062
Euler Solutions for Airfoil/Jet/Ground-Interaction Flowfields C86-059
Indicial Coefficients for a Cropped Delta Wing in Incompressible Flow C86-058
Ground Effect on Slender Wings at Moderate and High Angles of Attack C86-055
Experimental and Theoretical Study of Wings with Blunt Trailing Edges C86-052
Optimum Supersonic Wings with Subsonic Leading Edges C86-048
Aerodynamic Parameters Estimated from Flight and Wind Tunnel Data C86-045
Computation of Prop-Fan Engine Installation Aerodynamics C86-044
Unsteady Transonic Flow Calculations for Two-Dimensional Canard-Wing Configurations C86-043
Solution of the Unsteady Euler Equations for Fixed and Rotor Wing Configurations C86-042
Experimental Analysis of a Pitot-Type Air Intake C86-040
Cryogenic Tunnel Measurement of Total Temperature and Pressure C86-037
An Attached Flow Design of a Noninterfering Leading-Edge Extension to a Thick Delta Wing C86-036
Steady and Unsteady Transonic Pressure Distributions on NACA 0012 C86-032
Measurements of the Response of Transport Aircraft Ceiling Panels to Fuel Fires C86-031
A New and Less Complex Alternative to the Handley Page Slat C86-030
Numerical Optimization Design of Advanced Transonic Wing Configurations C86-029
Numerical Simulation of a Controlled-Flow Tunnel for V/STOL Testing C86-028
A Class of Airfoils Having Finite Trailing-Edge Pressure Gradients C86-015
Reverse-Flow Theorem Applied to Subsonic Unsteady Aerodynamic Forces C86-014
Airfoil Aerodynamics in Icing Conditions C86-010
Performance of a Forward Swept Wing Fighter Utilizing Thrust Vectoring and Reversing C86-009
Numerical Simulation of the Transonic Flowfield for Wing/Nacelle Configurations C86-005
Blended Blown Flaps and Vectored Thrust for Low-Speed Flight C86-003
Modeling Aerodynamic Responses to Aircraft Maneuvers--A Numerical Validation C86-002
Convergence Characteristics of a Vortex-Lattice Method for Nonlinear Configuration Aerodynamics C85-137
Correlation of Icing Relationships with Airfoil and Rotorcraft Icing Data C86-116
Visualization of Wing Tip Vortices in Accelerating and Steady Flow C86-113
Direct-Inverse Transonic Wing Analysis-Design Method with Viscous Interaction C86-108
Impact of Airfoil Profile on the Supersonic Aerodynamics of Delta Wings C86-106
Spanwise Variation of Laminar Separation Bubbles on Wings at Low Reynolds Numbers C86-105

Aeroelasticity

Exploratory Flutter Test in a Cryogenic Wind Tunnel C86-142
Unsteady Transonic Flow Calculations for Wing/Fuselage Configurations C86-141
ADAM, An Aeroservoelastic Analysis Method for Analog or Digital Systems C86-135
The Role of Structural and Aerodynamic Damping on the Aeroelastic Behavior of Wings C86-091
Transonic Aeroelastic Analysis of the B-1 Wing C86-083
Unsteady Transonic Flow Calculations for Interfering Lifting Surface Configurations C86-065
Indicial Coefficients for a Cropped Delta Wing in Incompressible Flow C86-058
Viscous Effects on Transonic Airfoil Stability and Response C86-057
New and Existing Techniques for Dynamic Loads Analyses of Flexible Airplanes C86-050
Steady and Unsteady Transonic Pressure Distributions on NACA 0012 C86-032
Reverse-Flow Theorem Applied to Subsonic Unsteady Aerodynamic Forces C86-014
Aeroelastic Tailoring--Theory, Practice, and Promise C86-001
Aeroelastic Divergence of Trimmed Aircraft C86-111

Avionics Systems

Integrated Navigation, Communication, and Surveillance Systems Based on Standard Distance Measuring Equipment C86-063
Longitudinal Flying Qualitites Criteria for Single-Pilot Instrument Flight Operations C86-017

Civil Missions and Transportation

Rapid Sizing Method for Airplanes C86-084

Configuration Design

Aerodynamic Tradeoff Study of Conventional, Canard, and Trisurface Aircraft Systems C86-121
Pressure Loading on Curved Leading Edge Wings in Supersonic Flow C86-087
Rapid Sizing Method for Airplanes C86-084
A Forward-Swept-Wing Fighter Configuration Designed by a Transonic Computational Method C86-077
Canard/Tail Comparison for an Advanced Variable-Sweep-Wing Fighter C86-069
Optimization of Three-Dimensional Computational Grids C86-064

Aerodynamic Investigations Toward an Adaptive Airfoil for a Transonic Transport Aircraft C86-062
A Computer-Augmented Procedure for Commercial Aircraft Configuration Development and Optimization C86-061
Experimental and Theoretical Study of Wings with Blunt Trailing Edges C86-052
Optimum Supersonic Wings with Subsonic Leading Edges C86-048
A New and Less Complex Alternative to the Handley Page Slat C86-030
Asymptotic Convergence of Higher-Order Accurate Panel Methods C86-019
Longitudinal Flying Qualitites Criteria for Single-Pilot Instrument Flight Operations C86-017
Turbine Bypass Remote Augmentor Lift System for V/STOL Aircraft C86-107
Impact of Airfoil Profile on the Supersonic Aerodynamics of Delta Wings C86-106

Deceleration Systems

Application of Kevlar to Parachute System Design C86-012

Economics

Acoustical Design Economic Tradeoff for Transport Aircraft C86-046

Flight Operations

An Approximate Model of Vortex Decay in the Atmosphere C86-086
Lightning Strikes to a NASA Airplane Penetrating Thunderstorms at Low Altitudes C86-076

General Aviation

Aerodynamic Tradeoff Study of Conventional, Canard, and Trisurface Aircraft Systems C86-121
Laboratory Study of Cabin Acoustic Treatments Installed in an Aircraft Fuselage C86-004

Ground Effect Machines

Euler Solutions for Airfoil/Jet/Ground-Interaction Flowfields C86-059

Guidance and Control

ADAM, An Aeroservoelastic Analysis Method for Analog or Digital Systems C86-135
Fighter Evasive Maneuvers Against Proportional Navigation Missile C86-131
Optimal Flight Paths Through Microburst Wind Profiles C86-096
Integrated Navigation, Communication, and Surveillance Systems Based on Standard Distance Measuring Equipment C86-063
Airplane Flight Through Wind-Shear Turbulence C86-114

Handling Qualities, Stability and Control

Landing Approach Handling Qualities of Transport Aircraft with Relaxed Static Stability C86-119
Aerodynamic Parameters Estimated from Flight and Wind Tunnel Data C86-045
Thrust-Vectored Takeoff, Landing, and Ground Handling of an Airship C86-038
Modeling Aerodynamic Responses to Aircraft Maneuvers--A Numerical Validation C86-002

Helicopters

Full-Potential Circular Wake Solution of a Twisted Rotor Blade in Hover C86-144
Aerodynamic Force Calculations of an Elliptical Circulation Control Airfoil C86-103
Influence of Nonlinear Blade Damping on Helicopter Ground Resonance Instability C86-016
An Experimental Investigation of Blade-Vortex Interaction at Normal Incidence C86-006
Correlation of Icing Relationships with Airfoil and Rotorcraft Icing Data C86-116

Landing Dynamics

Optimal Flight Paths Through Microburst Wind Profiles C86-096
A Review of Computer Simulations for Aircraft-Surface Dynamics C86-039
STALINS Method for Takeoff and Landing Trajectory Measurements C86-033

Lighter-than-Airships

Thrust-Vectored Takeoff, Landing, and Ground Handling of an Airship C86-038

Military Missions

Fighter Evasive Maneuvers Against Proportional Navigation Missile C86-131
Rapid Sizing Method for Airplanes C86-084
Computer Sizing of Fighter Aircraft C86-053

Navigation, Communication, and Traffic Control

Integrated Navigation, Communication, and Surveillance Systems Based on Standard Distance Measuring Equipment C86-063

Noise

Measurement and Prediction of Model-Rotor Flowfields C86-134
Experimental Study of Turboschaft Engine Core Noise C86-120
Noise and Performance of a Counter-Rotation Propeller C86-109
Acoustical Design Economic Tradeoff for Transport Aircraft C86-046
A Propeller Model for Studying Trace Velocity Effects on Interior Noise C86-022
Aeroacoustics of an Advanced Propeller Design Under Takeoff and Landing Conditions C86-021
Laboratory Study of Cabin Acoustic Treatments Installed in an Aircraft Fuselage C86-004
Noise of Counter-rotation Propellers with Nonsynchronous Rotors C85-199

Performance

Aerodynamic Design Considerations for Efficient High-Lift Supersonic Wings C86-123
Coordinated Turn Relations: A Graphical Representation C86-110
Canard/Tail Comparison for an Advanced Variable-Sweep-Wing Fighter C86-069
Dual-Wing Systems with Decalage Angle Optimization C86-068
CTOL Ski Jump: Analysis, Simulation, and Flight Test C86-060
Computer Sizing of Fighter Aircraft C86-053
Thrust-Vectored Takeoff, Landing, and Ground Handling of an Airship C86-038
STALINS Method for Takeoff and Landing Trajectory Measurements C86-033
Performance of a Forward Swept Wing Fighter Utilizing Thrust Vectoring and Reversing C86-009

Powerplant Design

Design and Development of a Power Takeoff Shaft C86-138
Effect of Engine Technology on Advanced Fighter Design and Cost C86-072
Turbine Bypass Remote Augmentor Lift System for V/STOL Aircraft C86-107

Propeller and Rotor Systems

Propeller-Wing Integration for Minimum Induced Loss C86-085
A Propeller Model for Studying Trace Velocity Effects on Interior Noise C86-022
An Experimental Investigation of Blade-Vortex Interaction at Normal Incidence C86-006
Noise of Counter-rotation Propellers with Nonsynchronous Rotors C85-199
Correlation of Icing Relationships with Airfoil and Rotorcraft Icing Data C86-116

Simulation

CTOL Ski Jump: Analysis, Simulation, and Flight Test C86-060
A Review of Computer Simulations for Aircraft-Surface Dynamics C86-039
A Ring-Vortex Downburst Model for Flight Simulations C86-035
Numerical Simulation of a Controlled-Flow Tunnel for V/STOL Testing C86-028
Composite Statistical Method for Modeling Wind Gusts C86-020
Airplane Flight Through Wind-Shear Turbulence C86-114

Structural Design (including Loads)

Tension Analysis of Stiffened Aircraft Structures C86-093
Random Vibration Analysis of Stiffened Honeycomb Panels with Beveled Edges C86-081
Design of a Carbon-Fiber-Reinforced Wing for the Alpha-Jet Major Panel Tests C86-073
A New Approach to Durability Prediction for Fuel Tank Skins C86-066
New and Existing Techniques for Dynamic Loads Analyses of Flexible Airplanes C86-050
Comparison of Discrete and Continuous Gust Methods for Airplane Design Loads Determination C86-034
Asymptotic Convergence of Higher-Order Accurate Panel Methods C86-019
Finite Element Analysis of an Ultralight Aircraft C86-011
Aeroelastic Tailoring--Theory, Practice, and Promise C86-001
Dynamic Loads on Twin Jet Exhaust Nozzles Due to Shock Noise C86-112

Structural Materials

Mechanical Behavior of 18 Ni 200 Grade Maraging Steel at Cryogenic Temperatures C86-117
Rapid Adhesive Bonding of Thermoplastic Composites and Titanium with Thermoplastic Adhesives C86-082

Design of a Carbon-Fiber-Reinforced Wing for the Alpha-Jet Major Panel Tests C86-073
Measurements of the Response of Transport Aircraft Ceiling Panels to Fuel Fires C86-031
The Joined Wing: An Overview C86-026
Asymptotic Convergence of Higher-Order Accurate Panel Methods C86-019

Subsystem Design

Design and Development of a Power Takeoff Shaft C86-138
Measurements of the Response of Transport Aircraft Ceiling Panels to Fuel Fires C86-031

Testing, Flight and Ground

Dynamic Support Interference in High-Alpha Testing C86-140
Performance Augmentation of a 60-Degree Delta Aircraft Configuration by Spanwise Blowing C86-127
Landing Approach Handling Qualities of Transport Aircraft with Relaxed Static Stability C86-119
Tension Analysis of Stiffened Aircraft Structures C86-093
An Approximate Model of Vortex Decay in the Atmosphere C86-086
Measurement of Ice Growth During Simulated and Natural Icing Conditions Using Ultrasonic Pulse-Echo Techniques C86-075
CTOL Ski Jump: Analysis, Simulation, and Flight Test C86-060
Turbulence for Flight Simulation C86-051
Aerodynamic Parameters Estimated from Flight and Wind Tunnel Data C86-045
Cryogenic Tunnel Measurement of Total Temperature and Pressure C86-037
STALINS Method for Takeoff and Landing Trajectory Measurements C86-033
Direct Derivative Measurements in the Presence of Sting Plunging C86-027
Compressibility Corrections for Multifoil Sections C86-024
Surface Roughness Studies for Wind Tunnel Models Used in High Reynolds Number Testing C86-007
Blended Blown Flaps and Vectored Thrust for Low-Speed Flight C86-003

Vibration

A New Approach to Durability Prediction for Fuel Tank Skins C86-066

Energy

Cryogenics

Mechanical Behavior of 18 Ni 200 Grade Maraging Steel at Cryogenic Temperatures C86-117

Rotating Machinery

Noise and Performance of a Counter-Rotation Propeller C86-109
Aeroacoustics of an Advanced Propeller Design Under Takeoff and Landing Conditions C86-021

Fluid Dynamics

Aeroacoustics

Measurement and Prediction of Model-Rotor Flowfields C86-134
Experimental Study of Turboschaft Engine Core Noise C86-120
Noise and Performance of a Counter-Rotation Propeller C86-109
Modeling Wind Tunnel Effects on the Radiation Characteristics of Acoustic Sources C86-070
Finite Element Modeling of Acoustic Singularities with Application to Propeller Noise C86-041
A Propeller Model for Studying Trace Velocity Effects on Interior Noise C86-022
Aeroacoustics of an Advanced Propeller Design Under Takeoff and Landing Conditions C86-021
An Experimental Investigation of Blade-Vortex Interaction at Normal Incidence C86-006
Noise of Counter-rotation Propellers with Nonsynchronous Rotors C85-199
Dynamic Loads on Twin Jet Exhaust Nozzles Due to Shock Noise C86-112
Experimental Investigation of Acoustically Excited Cavity Turbulence in Channel Flow C86-104

Boundary Layers and Convective Heat Transfer-Turbulent

Wall Temperature Control of Low-Speed Body Drag C86-013

Boundary-Layer Stability and Transition

A New and Less Complex Alternative to the Handley Page Slat C86-030
Spanwise Variation of Laminar Separation Bubbles on Wings at Low Reynolds Numbers C86-105

Computational Methods

Full-Potential Circular Wake Solution of a Twisted Rotor Blade in Hover C86-144
Nonlinear Aerodynamics of a Two-Dimensional Membrane Airfoil with Separation C86-132
Theoretical Prediction of Roll Moment on Wing-Controlled Missile C86-128
Method for Designing Closed Airfoils for Arbitrary Supercritical Speed Distributions C86-122
Euler Equations Analysis of the Initial Roll-Up of Aircraft Wakes C86-099
Aerodynamic Anomalies: Can CFD Prevent or Correct Them? C86-098
Vortex-Stretched Flow Around a Cranked Delta Wing C86-097
Computation of Rotor Blade Flows Using the Euler Equations C86-088
Application of a Supersonic Euler Code (SWINT) to Wing-Body-Tail Geometries C86-078
Application of Continuous Vorticity Panels to General Unsteady Incompressible Two-Dimensional Lifting Flows C86-071
Optimization of Three-Dimensional Computational Grids C86-064
Euler Solutions for Airfoil/Jet/Ground-Interaction Flowfields C86-059
Computation of Prop-Fan Engine Installation Aerodynamics C86-044
Solution of the Unsteady Euler Equations for Fixed and Rotor Wing Configurations C86-042
An Attached Flow Design of a Noninterfering Leading-Edge Extension to a Thick Delta Wing C86-036
A Ring-Vortex Downburst Model for Flight Simulations C86-035
Numerical Optimization Design of Advanced Transonic Wing Configurations C86-029
Applications of Adaptive-Wall Wind Tunnels C86-025
Wind Tunnel Wall Influence Considering Two-Dimensional High-Lift Configurations C86-018
Airfoil Aerodynamics in Icing Conditions C86-010
Convergence Characteristics of a Vortex-Lattice Method for Nonlinear Configuration Aerodynamics C85-137
Direct-Inverse Transonic Wing Analysis-Design Method with Viscous Interaction C86-108

Hydrodynamics

Body of Revolution Comparisons for Axial- and Surface-Singularity Distributions C86-102
Unsteady Flow Around an Ogive Cylinder C86-079
Turbulence for Flight Simulation C86-051

Jets, Wakes, and Viscid-Inviscid Flow Interactions

Transonic Separated Solutions for an Augmentor Wing C86-133
Density Stratification Effects on Wake Vortex Decay C86-130
Aerodynamic Force Calculations of an Elliptical Circulation Control Airfoil C86-103
Karman Vortex Shedding: Friend or Foe of the Structural Dynamicist? C86-095
Wake Hazard Alleviation Associated with Roll Oscillations of Wake-Generating Aircraft C86-074
Investigation of Vortex Patterns on Slender Bodies at High Angles of Attack C86-047
A Class of Airfoils Having Finite Trailing-Edge Pressure Gradients C86-015
Visualization of Wing Tip Vortices in Accelerating and Steady Flow C86-113
Experimental Investigation of Acoustically Excited Cavity Turbulence in Channel Flow C86-104

Nonsteady Aerodynamics

Unsteady Transonic Flow Calculations for Wing/Fuselage Configurations C86-141
Self-Induced Roll Oscillations Measured on a Delta Wing/Canard Configuration C86-129
Unsteady Loading on Airfoil Due to Vortices Released Intermittently from Its Surface C86-118
Unsteady Transonics of a Wing With Tip Store C86-101
Karman Vortex Shedding: Friend or Foe of the Structural Dynamicist? C86-095
The Role of Structural and Aerodynamic Damping on the Aeroelastic Behavior of Wings C86-091
Transonic Aeroelastic Analysis of the B-1 Wing C86-083
Unsteady Flow Around an Ogive Cylinder C86-079
Application of Continuous Vorticity Panels to General Unsteady Incompressible Two-Dimensional Lifting Flows C86-071
Unsteady Transonic Flow Calculations for Interfering Lifting Surface Configurations C86-065
Indicial Coefficients for a Cropped Delta Wing in Incompressible Flow C86-058
Viscous Effects on Transonic Airfoil Stability and Response C86-057

Solution of the Unsteady Euler Equations for Fixed and Rotor Wing Configurations C86-042
Direct Derivative Measurements in the Presence of Sting Plunging C86-027
Reverse-Flow Theorem Applied to Subsonic Unsteady Aerodynamic Forces C86-014
Modeling Aerodynamic Responses to Aircraft Maneuvers--A Numerical Validation C86-002
Visualization of Wing Tip Vortices in Accelerating and Steady Flow C86-113

Nozzle and Channel Flow

Performance of a Forward Swept Wing Fighter Utilizing Thrust Vectoring and Reversing C86-009

Subsonic Flow

Density Stratification Effects on Wake Vortex Decay C86-130
Theoretical Prediction of Roll Moment on Wing-Controlled Missile C86-128
Experimental Investigation of Apex Fence Flaps on Delta Wings C86-124
Euler Equations Analysis of the Initial Roll-Up of Aircraft Wakes C86-099
Vortex-Stretched Flow Around a Cranked Delta Wing C86-097
Dual-Wing Systems with Decalage Angle Optimization C86-068
Ground Effect on Slender Wings at Moderate and High Angles of Attack C86-055
Experimental and Theoretical Study of Wings with Blunt Trailing Edges C86-052
An Attached Flow Design of a Noninterfering Leading-Edge Extension to a Thick Delta Wing C86-036
Applications of Adaptive-Wall Wind Tunnels C86-025
Compressibility Corrections for Multifoil Sections C86-024
Wind Tunnel Wall Influence Considering Two-Dimensional High-Lift Configurations C86-018
A Class of Airfoils Having Finite Trailing-Edge Pressure Gradients C86-015
Airfoil Aerodynamics in Icing Conditions C86-010
Spanwise Variation of Laminar Separation Bubbles on Wings at Low Reynolds Numbers C86-105

Supersonic and Hypersonic Flow

Navier-Stokes Solution for a Complete Re-Entry Configuration C86-139
Aerodynamic Design Considerations for Efficient High-Lift Supersonic Wings C86-123
Lower-Side Normal Force Characteristics of Delta Wings at Supersonic Speeds C86-115
Application of a Supersonic Euler Code (SWINT) to Wing-Body-Tail Geometries C86-078
Optimum Supersonic Wings with Subsonic Leading Edges C86-048
Experimental Analysis of a Pitot-Type Air Intake C86-040
Impact of Airfoil Profile on the Supersonic Aerodynamics of Delta Wings C86-106

Transonic Flow

Full-Potential Circular Wake Solution of a Twisted Rotor Blade in Hover C86-144
Unsteady Transonic Flow Calculations for Wing/Fuselage Configurations C86-141
Transonic Separated Solutions for an Augmentor Wing C86-133
Method for Designing Closed Airfoils for Arbitrary Supercritical Speed Distributions C86-122
Unsteady Transonics of a Wing With Tip Store C86-101
Computation of Rotor Blade Flows Using the Euler Equations C86-088
Transonic Aeroelastic Analysis of the B-1 Wing C86-083
Unsteady Transonic Flow Calculations for Interfering Lifting Surface Configurations C86-065
Aerodynamic Investigations Toward an Adaptive Airfoil for a Transonic Transport Aircraft C86-062
Viscous Effects on Transonic Airfoil Stability and Response C86-057
Airfoil Optimization C86-054
Computation of Prop-Fan Engine Installation Aerodynamics C86-044
Cryogenic Tunnel Measurement of Total Temperature and Pressure C86-037
Numerical Optimization Design of Advanced Transonic Wing Configurations C86-029
Wind Tunnel Wall Influence Considering Two-Dimensional High-Lift Configurations C86-018
Surface Roughness Studies for Wind Tunnel Models Used in High Reynolds Number Testing C86-007
Direct-Inverse Transonic Wing Analysis-Design Method with Viscous Interaction C86-108

Interdisciplinary Topics

Aerospace Technology Utilization

Blended Blown Flaps and Vectored Thrust for Low-Speed Flight C86-003

Analytical and Numerical Methods

Composite Statistical Method for Modeling Wind Gusts C86-020

Atmospheric and Space Sciences

An Approximate Model of Vortex Decay in the Atmosphere C86-086
Lightning Strikes to a NASA Airplane Penetrating Thunderstorms at Low Altitudes C86-076
Measurement of Ice Growth During Simulated and Natural Icing Conditions Using Ultrasonic Pulse-Echo Techniques C86-075
A Ring-Vortex Downburst Model for Flight Simulations C86-035
Composite Statistical Method for Modeling Wind Gusts C86-020
The Lightning Threat to Aerospace Vehicles C86-008

Computer Software

Vortex-Stretched Flow Around a Cranked Delta Wing C86-097
A Review of Computer Simulations for Aircraft-Surface Dynamics C86-039

Numerical Analysis

Convergence Characteristics of a Vortex-Lattice Method for Nonlinear Configuration Aerodynamics C85-137

Research Facilities and Instrumentation

The Lightning Threat to Aerospace Vehicles C86-008

Safety

Optimal Flight Paths Through Microburst Wind Profiles C86-096
Lightning Strikes to a NASA Airplane Penetrating Thunderstorms at Low Altitudes C86-076
Turbulence for Flight Simulation C86-051
The Joined Wing: An Overview C86-026
The Lightning Threat to Aerospace Vehicles C86-008

Launch Vehicle and Missile (LV/M) Technology

Aerodynamics

Lower-Side Normal Force Characteristics of Delta Wings at Supersonic Speeds C86-115
Further Development of the Influence Function Method for Store Aerodynamic Analysis C86-100
Pressure Loading on Curved Leading Edge Wings in Supersonic Flow C86-087
Application of a Supersonic Euler Code (SWINT) to Wing-Body-Tail Geometries C86-078

Configurational Design

Optimization of Three-Dimensional Computational Grids C86-064

Guidance

Fighter Evasive Maneuvers Against Proportional Navigation Missile C86-131

Trajectories and Tracking Systems

Further Development of the Influence Function Method for Store Aerodynamic Analysis C86-100

Propulsion

Airbreathing Propulsion

Effect of Engine Technology on Advanced Fighter Design and Cost C86-072

Engine Performance

Effect of Engine Technology on Advanced Fighter Design and Cost C86-072

Structural Mechanics and Materials

Aeroelasticity and Hydroelasticity

Exploratory Flutter Test in a Cryogenic Wind Tunnel C86-142
Control of Aeroelastic Instabilities Through Stiffness Cross-Coupling C86-023
Aeroelastic Divergence of Trimmed Aircraft C86-111

Materials, Properties of

Mechanical Behavior of 18 Ni 200 Grade Maraging Steel at Cryogenic Temperatures C86-117
Interlaminar Fracture Characteristics of Tougher Thermoset Materials C86-090
Rapid Adhesive Bonding of Thermoplastic Composites and Titanium with Thermoplastic Adhesives C86-082

Static Strength Analysis of Pin-Loaded Lugs C86-067
Application of Effective Stress Intensity Factors to Crack Growth Rate Description C86-049

Structural Composite Materials

Shear Buckling of Composite Cylindrical Panels Considering Material Degradation C86-143
Equivalent Plate Analysis of Aircraft Wing Box Structures with General Planform Geometry C86-136
Interlaminar Fracture Characteristics of Tougher Thermoset Materials C86-090
Buckling, Postbuckling, and Crippling of Shallow-Curved Composite Plates with Edge Stiffeners C86-089
Rapid Adhesive Bonding of Thermoplastic Composites and Titanium with Thermoplastic Adhesives C86-082
Response of Composite Material Shallow Arch to Concentrated Load C86-080
Design of a Carbon-Fiber-Reinforced Wing for the Alpha-Jet Major Panel Tests C86-073
Optimal Design of Antisymmetric Laminated Composite Plates C86-056
Control of Aeroelastic Instabilities Through Stiffness Cross-Coupling C86-023
Aeroelastic Tailoring--Theory, Practice, and Promise C86-001

Structural Design

Circulation Control Airfoils as Applied to Rotary-Wing Aircraft C86-137
Tension Analysis of Stiffened Aircraft Structures C86-093
Buckling, Postbuckling, and Crippling of Shallow-Curved Composite Plates with Edge Stiffeners C86-089
Static Strength Analysis of Pin-Loaded Lugs C86-067
Optimal Design of Antisymmetric Laminated Composite Plates C86-056

Structural Durability (including Fatigue and Fracture)

Interlaminar Fracture Characteristics of Tougher Thermoset Materials C86-090
Random Vibration Analysis of Stiffened Honeycomb Panels with Beveled Edges C86-081
A New Approach to Durability Prediction for Fuel Tank Skins C86-066
Application of Effective Stress Intensity Factors to Crack Growth Rate Description C86-049
Finite Element Analysis of an Ultralight Aircraft C86-011

Structural Dynamics

Exploratory Flutter Test in a Cryogenic Wind Tunnel C86-142
Equivalent Plate Analysis of Aircraft Wing Box Structures with General Planform Geometry C86-136
Karman Vortex Shedding: Friend or Foe of the Structural Dynamicist? C86-095
Random Vibration Analysis of Stiffened Honeycomb Panels with Beveled Edges C86-081
New and Existing Techniques for Dynamic Loads Analyses of Flexible Airplanes C86-050
Influence of Nonlinear Blade Damping on Helicopter Ground Resonance Instability C86-016
Airplane Flight Through Wind-Shear Turbulence C86-114

Structural Stability

Shear Buckling of Composite Cylindrical Panels Considering Material Degradation C86-143
Buckling, Postbuckling, and Crippling of Shallow-Curved Composite Plates with Edge Stiffeners C86-089
Response of Composite Material Shallow Arch to Concentrated Load C86-080
Optimal Design of Antisymmetric Laminated Composite Plates C86-056
Control of Aeroelastic Instabilities Through Stiffness Cross-Coupling C86-023

Structural Statics

Shear Buckling of Composite Cylindrical Panels Considering Material Degradation C86-143
Equivalent Plate Analysis of Aircraft Wing Box Structures with General Planform Geometry C86-136
Static Strength Analysis of Pin-Loaded Lugs C86-067

Thermophysics and Thermochemistry

Ablation, Pyrolysis, Thermal Decomposition and Degradation (including Refractories)

The Joined Wing: An Overview C86-026

Chronological Index

C85-137 Convergence Characteristics of a Vortex-Lattice Method for Nonlinear Configuration Aerodynamics. Z. Rusak, *Technion-Israel Institute of Technology*; A. Seginer, *NASA Ames Research Center*; and E. Wasserstrom, *Technion-Israel Institute of Technology* (**22**, 9, p. 743) Article based on AIAA Paper 83-1882 CP834
Technical Comment by James M. Luckring, *NASA Langley Research Center* (**23**, 10, p. 798)
Reply (**23**, 10, p. 799)

C85-199 Noise of Counter-rotation Propellers with Nonsynchronous Rotors. D. B. Hanson and C. J. McColgan, *Hamilton Standard* (**22**, 12, p. 1097) Engineering Note
Errata (**23**, 7, p. 608)

C86-001 Aeroelastic Tailoring--Theory, Practice, and Promise. Michael H. Shirk and Terrence J. Hertz, *Air Force Wright Aeronautical Laboratories, Wright-Patterson Air Force Base*; and Terrence A. Weisshaar, *Purdue University* (**23**, 1, p. 6) Survey Paper based on AIAA Paper 84-0982 CP844

C86-002 Modeling Aerodynamic Responses to Aircraft Maneuvers--A Numerical Validation. Joseph Katz and Lewis B. Schiff, *NASA Ames Research Center* (**23**, 1, p. 19) Article based on AIAA Paper 84-2079 CP849

C86-003 Blended Blown Flaps and Vectored Thrust for Low-Speed Flight. John E. Carr, *Grumman Aerospace Corporation* (**23**, 1, p. 26) Article based on AIAA Paper 84-2199

C86-004 Laboratory Study of Cabin Acoustic Treatments Installed in an Aircraft Fuselage. Karen E. Heitman and John S. Mixson, *NASA Langley Research Center* (**23**, 1, p. 32) Article based on AIAA Paper 84-2330

C86-005 Numerical Simulation of the Transonic Flowfield for Wing/Nacelle Configurations. Essam H. Atta and Joseph Vadyak, *Lockheed-Georgia Company* (**23**, 1, p. 39) Article

C86-006 An Experimental Investigation of Blade-Vortex Interaction at Normal Incidence. Ali R. Ahmadi, *Bolt Beranek and Newman Inc.* (**23**, 1, p. 47) Article based on AIAA Paper 85-0003

C86-007 Surface Roughness Studies for Wind Tunnel Models Used in High Reynolds Number Testing. T. V. Vorburger, M. J. McLay, F. E. Scire, D. E. Gilsinn, C. H. W. Giauque and E. C. Teague, *National Bureau of Standards* (**23**, 1, p. 56) Article based on AIAA Paper 85-0228

C86-008 The Lightning Threat to Aerospace Vehicles. P. L. Rustan Jr., *Air Force Wright Aeronautical Laboratories, Wright-Patterson Air Force Base* (**23**, 1, p. 62) Article based on AIAA Paper 85-0094

C86-009 Performance of a Forward Swept Wing Fighter Utilizing Thrust Vectoring and Reversing. Eugene H. Miller, *Grumman Aerospace Corporation* (**23**, 1, p. 68) Article based on AIAA Paper 83-2482

C86-010 Airfoil Aerodynamics in Icing Conditions. M. B. Bragg, G. M. Gregorek and J. D. Lee, *Ohio State University* (**23**, 1, p. 76) Article

C86-011 Finite Element Analysis of an Ultralight Aircraft. T. V. Baughn and P. F. Packman, *Southern Methodist University* (**23**, 1, p. 82) Article based on AIAA Paper 85-0616 CP851

C86-012 Application of Kevlar to Parachute System Design. C. W. Peterson, W. B. Pepper, D. W. Johnson and I. T. Holt, *Sandia National Laboratories* (**23**, 1, p. 87) Article based on AIAA Paper 84-0810 CP843

C86-013 Wall Temperature Control of Low-Speed Body Drag. John C. Lin, *NASA Langley Research Center*; and Robert L. Ash, *Old Dominion University* (**23**, 1, p. 93) Engineering Note

C86-014 Reverse-Flow Theorem Applied to Subsonic Unsteady Aerodynamic Forces. I. Lottati, *Technion--Israel Institute of Technology* (**23**, 1, p. 95) Engineering Note

C86-015 A Class of Airfoils Having Finite Trailing-Edge Pressure Gradients. A. I. Ormsbee, *University of Illinois*; and M. D. Maughmer, *The Pennsylvania State University* (**23**, 2, p. 97) Article based on AIAA Paper 85-0206

C86-016 Influence of Nonlinear Blade Damping on Helicopter Ground Resonance Instability. D. M. Tang and E. H. Dowell, *Duke University* (**23**, 2, p. 104) Article

C86-017 Longitudinal Flying Qualities Criteria for Single-Pilot Instrument Flight Operations. Aharon Bar-Gill and Robert F. Stengel, *Princeton University* (**23**, 2, p. 111) Article

C86-018 Wind Tunnel Wall Influence Considering Two-Dimensional High-Lift Configurations. T. E. Labrujere, R. A. Maarsingh and J. Smith, *National Aerospace Laboratory (NLR), The Netherlands* (**23**, 2, p. 118) Article

C86-019 Asymptotic Convergence of Higher-Order Accurate Panel Methods. B. Oskam, *National Aerospace Laboratory (NLR), The Netherlands* (**23**, 2, p. 126) Article

C86-020 Composite Statistical Method for Modeling Wind Gusts. James R. Schiess, *NASA Langley Research Center* (**23**, 2, p. 131) Article based on AIAA Paper 85-1750 CP855

C86-021 Aeroacoustics of an Advanced Propeller Design Under Takeoff and Landing Conditions. S. Fujii, H. Nishiwaki and K. Takeda, *National Aerospace Laboratory, Japan* (**23**, 2, p. 136) Article

C86-022 A Propeller Model for Studying Trace Velocity Effects on Interior Noise. J. R. Mahan, *Virginia Polytechnic Institute and State University*; and C. R. Fuller, *Virginia Polytechnic and State University* (**23**, 2, p. 142) Article based on AIAA Paper 85-0787 CP851

C86-023 Control of Aeroelastic Instabilities Through Stiffness Cross-Coupling. Terrence A. Weisshaar, *Purdue University*; and Rosemary J. Ryan, *Rockwell International Corporation* (**23**, 2, p. 148) Article based on AIAA Paper 84-0985 CP844

C86-024 Compressibility Corrections for Multifoil Sections. Alan Harris, *de Havilland Aircraft of Canada, Ltd.* (**23**, 2, p. 156) Engineering Note

C86-025 Applications of Adaptive-Wall Wind Tunnels. Sanford S. Davis, *NASA Ames Research Center* (**23**, 2, p. 158) Engineering Note

C86-026 The Joined Wing: An Overview. Julian Wolkovitch, *ACA Industries, Inc.* (**23**, 3, p. 161) Survey Paper based on AIAA Paper 85-0274

C86-027 Direct Derivative Measurements in the Presence of Sting Plunging. Martin E. Beyers, *National Research Council of Canada* (**23**, 3, p. 179) Article based on AIAA Paper 84-2107 CP849

C86-028 Numerical Simulation of a Controlled-Flow Tunnel for V/STOL Testing. Paresh C. Parikh and Robert G. Joppa, *University of Washington* (**23**, 3, p. 186) Article based on AIAA Paper 84-2152

C86-029 Numerical Optimization Design of Advanced Transonic Wing Configurations. Gary B. Cosentino, *University of Colorado*; and Terry L. Holst, *NASA Ames Research Center* (**23**, 3, p. 192) Article based on AIAA Paper 85-0424

C86-030 A New and Less Complex Alternative to the Handley Page Slat. Arthur L. Williams, *Northrop Corporation* (**23**, 3, p. 200) Article based on AIAA Paper 85-0352

C86-031 Measurements of the Response of Transport Aircraft Ceiling Panels to Fuel Fires. C. P. Bankston and L. H. Back, *Jet Propulsion Laboratory, California Institute of Technology* (**23**, 3, p. 207) Article

C86-032 Steady and Unsteady Transonic Pressure Distributions on NACA 0012. Hermann Triebstien, *Deutsche Forschungs-und Versuchanstalt für Luft und Raumfarht e.V.* (**23**, 3, p. 213) Article

C86-033 STALINS Method for Takeoff and Landing Trajectory Measurements. C. G. Kranenburg, A. Pool and A. J. L. Willekens, *National Aerospace Laboratory (NLR), The Netherlands* (**23**, 3, p. 220) Article

C86-034 Comparison of Discrete and Continuous Gust Methods for Airplane Design Loads Determination. R. Noback, *National Aerospace Laboratory, The Netherlands* (**23**, 3, p. 226) Article

C86-035 A Ring-Vortex Downburst Model for Flight Simulations. Michael Ivan, *Boeing Computer Services Company* (**23**, 3, p. 232) Article based on AIAA Paper 85-1749 CP855

C86-036 An Attached Flow Design of a Noninterfering Leading-Edge Extension to a Thick Delta Wing. Farhad Ghaffari, *Vigyan Research Associates, Inc.*; and John E. Lamar, *NASA Langley Research Center* (**23**, 3, p. 237) Article based on AIAA Paper 85-0350

C86-037 Cryogenic Tunnel Measurement of Total Temperature and Pressure. Wing-Fai Ng and Joel C. Rosson, *Virginia Polytechnic Institute and State University* (**23**, 3, p. 244) Article

C86-038 Thrust-Vectored Takeoff, Landing, and Ground Handling of an Airship. B. L. Nagabhushan and N. P. Tomlinson, *Goodyear Aerospace Corporation* (**23**, 3, p. 250) Article based on AIAA Paper 85-0877 CP853

C86-039 A Review of Computer Simulations for Aircraft-Surface Dynamics. George R. Doyle Jr., *University of Dayton* (**23**, 4, p. 257) Survey Paper

C86-040 Experimental Analysis of a Pitot-Type Air Intake. Dieter Welte, *Dornier GmbH, Federal Republic of Germany* (**23**, 4, p. 266) Article

C86-041 Finite Element Modeling of Acoustic Singularities with Application to Propeller Noise. W. Eversman and J. E. Steck, *University of Missouri, Rolla* (**23**, 4, p. 275) Article based on AIAA Paper 84-2286

C86-042 Solution of the Unsteady Euler Equations for Fixed and Rotor Wing Configurations. N. L. Sankar, B. E. Wake and S. G. Lekoudis, *Georgia Institute of Technology* (**23**, 4, p. 283) Article based on AIAA Paper 85-0120

C86-043 Unsteady Transonic Flow Calculations for Two-Dimensional Canard-Wing Configurations. John T. Batina, *NASA Langley Research Center* (**23**, 4, p. 290) Article based on AIAA Paper 85-0585 CP851

C86-044 Computation of Prop-Fan Engine Installation Aerodynamics. C. W. Boppe and B. S. Rosen, *Grumman Corporation* (**23**, 4, p. 299) Article

C86-045 Aerodynamic Parameters Estimated from Flight and Wind Tunnel Data. V. Klein, *NASA Langley Research Center*; and J. G. Batterson, *George Washington University, NASA Langley Research Center* (**23**, 4, p. 306) Article

C86-046 Acoustical Design Economic Tradeoff for Transport Aircraft. Arturo Benito, *Polytechnic University of Madrid* (**23**, 4, p. 313) Article

C86-047 Investigation of Vortex Patterns on Slender Bodies at High Angles of Attack. Wu Genxing, Wang Tzehsing and Tian Shixhong, *Nanjing Aeronautical Institute, China* (**23**, 4, p. 321) Article

C86-048 Optimum Supersonic Wings with Subsonic Leading Edges. H. J. Bos, *Delft University of Technology, the Netherlands* (**23**, 4, p. 326) Article

C86-049 Application of Effective Stress Intensity Factors to Crack Growth Rate Description. A. F. Liu, *Northrop Corporation* (**23**, 4, p. 333) Article based on AIAA Paper 84-0884 CP844

C86-050 New and Existing Techniques for Dynamic Loads Analyses of Flexible Airplanes. Anthony S. Pototzky, *PRC--Kentron, Inc.*; and Boyd Perry III, *NASA Langley Research Center* (**23**, 4, p. 340) Article based on AIAA Paper 85-0808 CP851

C86-051 Turbulence for Flight Simulation. George Trevino, *Michigan Technological University* (**23**, 4, p. 348) Engineering Note

C86-052 Experimental and Theoretical Study of Wings with Blunt Trailing Edges. V. Ramjee, E. G. Tulapurkara and V. Balabaskaran, *Indian Institute of Technology* (**23**, 4, p. 349) Engineering Note

C86-053 Computer Sizing of Fighter Aircraft. Peter G. Coen and Willard E. Foss Jr., *NASA Langley Research Center* (**23**, 5, p. 353) Synoptic based on AIAA Paper 85-0212

C86-054 Airfoil Optimization. Per Krantz and Sven G. Hedman, *The Aeronautical Research Institute of Sweden (FAA)* (**23**, 5, p. 355) Synoptic

C86-055 Ground Effect on Slender Wings at Moderate and High Angles of Attack. J. Er-El and D. Weihs, *Technion--Israel Institute of Technology* (**23**, 5, p. 357) Synoptic

C86-056 Optimal Design of Antisymmetric Laminated Composite Plates. N. G. R. Iyengar, *University of Arizona*; and S. P. Joshi, *Purdue University* (**23**, 5, p. 359) Synoptic based on AIAA Paper 85-0796 CP851

C86-057 Viscous Effects on Transonic Airfoil Stability and Response. H. M. Berry, *General Dynamics Corporation*; J. T. Batina, *NASA Langley Research Center*; and T. Y. Yang, *Purdue University* (**23**, 5, p. 361) Article based on AIAA Paper 85-0586 CP851

C86-058 Indicial Coefficients for a Cropped Delta Wing in Incompressible Flow. Valter J. E. Stark, *Saab Scania AB, Sweden* (**23**, 5, p. 370) Article

C86-059 Euler Solutions for Airfoil/Jet/Ground-Interaction Flowfields. Ramesh K. Agarwal and Jerry E. Deese, *McDonnell Douglas Research Laboratories* (**23**, 5, p. 376) Article

C86-060 CTOL Ski Jump: Analysis, Simulation, and Flight Test. John W. Clark Jr. and Marvin M. Walters, *Naval Air Development Center* (**23**, 5, p. 382) Article

C86-061 A Computer-Augmented Procedure for Commercial Aircraft Configuration Development and Optimization. C. Haberland and W. Fenske, *Technical University of Berlin*; and J. Thorbeck, *Deutsche Lufthansa, Federal Republic of Germany* (**23**, 5, p. 390) Article

C86-062 Aerodynamic Investigations Toward an Adaptive Airfoil for a Transonic Transport Aircraft. G. Redeker, *Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt e.V., Federal Republic of Germany*; G. Wichmann, *Technische Universität Braunschweig, Federal Republic of Germany*; and H.-C. Oelker, *Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt e.V., Federal Republic of Germany* (**23**, 5, p. 398) Article

C86-063 Integrated Navigation, Communication, and Surveillance Systems Based on Standard Distance Measuring Equipment. A. Becker, *Deutsche Forschungs-und Versuchsanstalt für Luft- und Raumfahrt E.V., Federal Republic of Germany* (**23**, 5, p. 406) Article

C86-064 Optimization of Three-Dimensional Computational Grids. Richard Carcaillet, *University of Texas, Austin*; Stephen R. Kennon and George S. Dulikravich, *The University of Texas, Austin* (**23**, 5, p. 415) Article based on AIAA Paper 85-4088

C86-065 Unsteady Transonic Flow Calculations for Interfering Lifting Surface Configurations. John T. Batina, *NASA Langley Research Center* (**23**, 5, p. 422) Article based on AIAA Paper 85-1711

C86-066 A New Approach to Durability Prediction for Fuel Tank Skins. M. A. Ferman, W. H. Unger and C. R. Saff, *McDonnell Aircraft Company*; and M. D. Richardson, *Air Force Wright Aeronautical Laboratory, Wright-Patterson Air Force Base* (**23**, 5, p. 431) Article based on AIAA Paper 85-0602 CP851

C86-067 Static Strength Analysis of Pin-Loaded Lugs. J. C. Ekvall, *Lockheed-California Company* (**23**, 5, p. 438) Article

C86-068 Dual-Wing Systems with Decalage Angle Optimization. Kamran Rokhsaz and Bruce P. Selberg, *University of Missouri, Rolla* (**23**, 5, p. 444) Article based on AIAA Paper 84-2161

C86-069 Canard/Tail Comparison for an Advanced Variable-Sweep-Wing Fighter. Joseph P. Landfield and Dario Rajkovic, *Grumman Corporation* (**23**, 6, p. 449) Article based on AIAA Paper 84-2401

C86-070 Modeling Wind Tunnel Effects on the Radiation Characteristics of Acoustic Sources. W. Eversman, *University of Missouri, Rolla*; and K. J. Baumeister, *NASA Lewis Research Center* (**23**, 6, p. 455) Article based on AIAA Paper 84-2364

C86-071 Application of Continuous Vorticity Panels to General Unsteady Incompressible Two-Dimensional Lifting Flows. M. J. Kim and D. T. Mook, *Virginia Polytechnic Institute and State University* (**23**, 6, p. 464) Article based on AIAA Paper 85-0282

C86-072 Effect of Engine Technology on Advanced Fighter Design and Cost. Otfrid Herrmann and Werner Biehl, *Messerschmitt-Boelkow-Blohm GmbH, Federal Republic of Germany* (**23**, 6, p. 472) Article

C86-073 Design of a Carbon-Fiber-Reinforced Wing for the Alpha-Jet Major Panel Tests. D. Rose and E. Henze, *Dornier GmbH, Federal Republic of Germany*; D. Wurzel and H. Schelling, *Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt e.V., Federal Republic of Germany* (**23**, 6, p. 477) Article based on AIAA Paper 85-0725 CP851

C86-074 Wake Hazard Alleviation Associated with Roll Oscillations of Wake-Generating Aircraft. Vernon J. Rossow, *NASA Ames Research Center* (**23**, 6, p. 484) Article based on AIAA Paper 85-1774 CP857

C86-075 Measurement of Ice Growth During Simulated and Natural Icing Conditions Using Ultrasonic Pulse-Echo Techniques. R. John Hansman Jr. and Mark S. Kirby, *Massachusetts Institute of Technology* (**23**, 6, p. 492) Article based on AIAA Paper 86-0410

C86-076 Lightning Strikes to a NASA Airplane Penetrating Thunderstorms at Low Altitudes. Vladislav Mazur, *National Severe Storms Laboratory*; Bruce D. Fisher, *NASA Langley Research Center*; and John C. Gerlach, *NASA Goddard Space Flight Center* (**23**, 6, p. 499) Article

C86-077 A Forward-Swept-Wing Fighter Configuration Designed by a Transonic Computational Method. Michael J. Mann and Charles E. Mercer, *NASA Langley Research Center* (**23**, 6, p. 506) Article based on AIAA Paper 85-4069

C86-078 Application of a Supersonic Euler Code (SWINT) to Wing-Body-Tail Geometries. Jerry M. Allen and James C. Townsend, *NASA Langley Research Center* (**23**, 6, p. 513) Article based on AIAA Paper 85-1811 CP857

C86-079 Unsteady Flow Around an Ogive Cylinder. Mohamed Gad-el-Hak and Chih-Ming Ho, *Flow Research Company* (**23**, 6, p. 520) Article based on AIAA Paper 86-0572

C86-080 Response of Composite Material Shallow Arch to Concentrated Load. Eric R. Johnson, *Virginia Polytechnic Institute and State University*; Michael W. Hyer, *University of Maryland*; and Douglas M. Carper, *Pratt and Whitney Aircraft* (**23**, 6, p. 529) Article based on AIAA Paper 84-0594 CP844

C86-081 Random Vibration Analysis of Stiffened Honeycomb Panels with Beveled Edges. J. Soovere, *Lockheed-California Company* (**23**, 6, p. 537) Article based on AIAA Paper 85-0603 CP851

C86-082 Rapid Adhesive Bonding of Thermoplastic Composites and Titanium with Thermoplastic Adhesives. Bland A. Stein, William T. Hodges and James R. Tyeryar, *NASA Langley Research Center* (**23**, 7, p. 545) Synoptic based on AIAA Paper 85-0750 CP851

C86-083 Transonic Aeroelastic Analysis of the B-1 Wing. Guru P. Guruswamy, *Sterling Software/Informatics*; Peter M. Goorjian, *NASA Ames Research Center*; Hiroshi Ide and Gerry D. Miller, *Rockwell International* (**23**, 7, p. 547) Article based on AIAA Paper 85-0690 CP851

C86-084 Rapid Sizing Method for Airplanes. Jan Roskam, *The University of Kansas* (**23**, 7, p. 554) Article

C86-085 Propeller-Wing Integration for Minimum Induced Loss. Ilan Kroo, *Stanford University* (**23**, 7, p. 561) Article based on AIAA Paper 84-2470

C86-086 An Approximate Model of Vortex Decay in the Atmosphere. George C. Greene, *NASA Langley Research Center* (**23**, 7, p. 566) Article based on AIAA Paper 85-1835 CP857

C86-087 Pressure Loading on Curved Leading Edge Wings in Supersonic Flow. Milton E. Vaughn Jr., *U.S. Army Missile Command*; and John E. Burkhalter, *Auburn University* (**23**, 7, p. 574) Article

C86-088 Computation of Rotor Blade Flows Using the Euler Equations. B. E. Wake, N. L. Sankar and S. G. Lekoudis, *Georgia Institute of Technology* (**23**, 7, p. 582) Article based on AIAA Paper 85-5010

C86-089 Buckling, Postbuckling, and Crippling of Shallow-Curved Composite Plates with Edge Stiffeners. Rocky R. Arnold, *Anamet Laboratories Inc.*; S. Y. Yoo, *Hanyang University, Korea*; and J. Mayers, *Stanford University* (**23**, 7, p. 589) Article based on AIAA Paper 85-0769 CP851

C86-090 Interlaminar Fracture Characteristics of Tougher Thermoset Materials. R. C. Shah, G. Miliziano and A. V. Viswanathan, *Boeing Military Airplane Company* (**23**, 7, p. 599) Article based on AIAA Paper 85-0609 CP851

C86-091 The Role of Structural and Aerodynamic Damping on the Aeroelastic Behavior of Wings. I. Lottati, *Technion--Israel Institute of Technology* (**23**, 7, p. 606) Engineering Note

C86-093 Tension Analysis of Stiffened Aircraft Structures. M. Mohaghegh, *Boeing Commercial Airplane Company* (**23**, 8, p. 609) Synoptic based on AIAA Paper 85-0795 CP851

C86-094 Unsteady Aerodynamic Modeling of a Fighter Wing in Transonic Flow. J. B. Malone, *Lockheed-Georgia Company*; L. N. Sankar, *Georgia Institute of Technology*; and W. A. Sotomayer, *Air Force Wright Aeronautical Laboratories, Wright-Patterson Air Force Base* (**23**, 8, p. 611) Article based on AIAA Paper 84-1566

C86-095 Karman Vortex Shedding: Friend or Foe of the Structural Dynamicist?. L. E. Ericsson, *Lockheed Missiles & Space Company, Inc.* (**23**, 8, p. 621) Article based on AIAA Paper 85-0661 CP851

C86-096 Optimal Flight Paths Through Microburst Wind Profiles. Mark L. Psiaki and Robert F. Stengel, *Princeton University* (**23**, 8, p. 629) Article based on AIAA Paper 85-1833 CP857

C86-097 Vortex-Stretched Flow Around a Cranked Delta Wing. Arthur Rizzi, *FFA, The Aeronautical Research Institute of Sweden*; and Charles J. Purcell, *ETA Systems, Inc.* (**23**, 8, p. 636) Article based on AIAA Paper 85-4080

C86-098 Aerodynamic Anomalies: Can CFD Prevent or Correct Them? Richard S. Shevell, *Stanford University* (**23**, 8, p. 641) Article based on AIAA Paper 85-4067

C86-099 Euler Equations Analysis of the Initial Roll-Up of Aircraft Wakes. R. A. Mitcheltree, *North Carolina State University*; R. J. Margason, *NASA Langley Research Center*; and H. A. Hassan, *North Carolina State University* (**23**, 8, p. 650) Article based on AIAA Paper 86-0078

C86-100 Further Development of the Influence Function Method for Store Aerodynamic Analysis. A. Cenko, *Hofstra University*; R. Meyer and F. Tessitore, *Grumman Aerospace Corporation* (**23**, 8, p. 656) Article based on AIAA Paper 83-0266

C86-101 Unsteady Transonics of a Wing With Tip Store. Guru P. Guruswamy, *Sterling Software/Informatics*; Peter M. Goorjian and Eugene L. Tu, *NASA Ames Research Center* (**23**, 8, p. 662) Article based on AIAA Paper 86-0010

C86-102 Body of Revolution Comparisons for Axial- and Surface-Singularity Distributions. Joseph M. D'Sa and Charles Dalton, *University of Houston* (**23**, 8, p. 669) Engineering Note

C86-103 Aerodynamic Force Calculations of an Elliptical Circulation Control Airfoil. M. Sun, S. I. Pai and I. Chopra, *University of Maryland* (**23**, 9, p. 673) Article

J86-104 Experimental Investigation of Acoustically Excited Cavity Turbulence in Channel Flow. K. M. M. Alshamani, *University of Technology, Iraq*; J. L. Livesey and F. J. Edwards, *University of Salford, England* (**23**, 9, p. 681) Article based on AIAA Paper 84-2260

J86-105 Spanwise Variation of Laminar Separation Bubbles on Wings at Low Reynolds Numbers. William G. Bastedo Jr. and Thomas J. Mueller, *University of Notre Dame* (**23**, 9, p. 687) Article based on AIAA Paper 85-1590

J86-106 Impact of Airfoil Profile on the Supersonic Aerodynamics of Delta Wings. Richard M. Wood and David S. Miller, *NASA Langley Research Center* (**23**, 9, p. 695) Article based on AIAA Paper 85-4073

J86-107 Turbine Bypass Remote Augmentor Lift System for V/STOL Aircraft. Arthur E. Sheridan, *General Dynamics* (**23**, 9, p. 703) Article based on AIAA Paper 85-3086

J86-108 Direct-Inverse Transonic Wing Analysis-Design Method with Viscous Interaction. Leland A. Carlson, *Texas A&M University*; and Richard A. Weed, *Lockheed-Georgia Company* (**23**, 9, p. 711) Article based on AIAA Paper 85-4075

C86-109 Noise and Performance of a Counter-Rotation Propeller. S. Fujii, H. Nishiwaki and K. Takeda, *National Aerospace Laboratory, Tokyo* (**23**, 9, p. 719) Article

C86-110 Coordinated Turn Relations: A Graphical Representation. Charles Libove, *Syracuse University* (**23**, 9, p. 725) Engineering Note

C86-111 Aeroelastic Divergence of Trimmed Aircraft. Ll. T. Niblett, *Royal Aircraft Establishment, England* (**23**, 9, p. 727) Engineering Note

C86-112 Dynamic Loads on Twin Jet Exhaust Nozzles Due to Shock Noise. Thomas D. Norum and John G. Shearin, *NASA Langley Research Center* (**23**, 9, p. 728) Engineering Note

C86-113 Visualization of Wing Tip Vortices in Accelerating and Steady Flow. P. Freymuth, F. Finaish and W. Bank, *University of Colorado* (**23**, 9, p. 730) Engineering Note based on AIAA Paper 86-1096

C86-114 Airplane Flight Through Wind-Shear Turbulence. George Trevino, *Michigan Technological University* (**23**, 9, p. 733) Engineering Note

C86-115 Lower-Side Normal Force Characteristics of Delta Wings at Supersonic Speeds. Erik S. Larson, *FFA, The Aeronautical Research Institute of Sweden* (**23**, 9, p. 735) Engineering Note

C86-116 Correlation of Icing Relationships with Airfoil and Rotorcraft Icing Data. Robert J. Flemming and David A. Lednicer, *United Technologies Corporation* (**23**, 10, p. 737) Article based on AIAA Paper 85-0337

C86-117 Mechanical Behavior of 18 Ni 200 Grade Maraging Steel at Cryogenic Temperatures. John A. Wagner, *NASA Langley Research Center* (**23**, 10, p. 744) Article based on AIAA Paper 85-0704 CP851

C86-118 Unsteady Loading on Airfoil Due to Vortices Released Intermittently from Its Surface. Chuen-Yen Chow and Chyn-Shan Chiu, *University of Colorado* (**23**, 10, p. 750) Article

C86-119 Landing Approach Handling Qualities of Transport Aircraft with Relaxed Static Stability. Knut Wilhelm and Dieter Schafranek, *Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Federal Republic of Germany* (**23**, 10, p. 756) Article

C86-120 Experimental Study of Turboschaft Engine Core Noise. A. Guédel, *Office National d'Etudes et de Recherches Aérospatiales, France*; and A. Farrando, *Turboméca, France* (**23**, 10, p. 763) Article

C86-121 Aerodynamic Tradeoff Study of Conventional, Canard, and Trisurface Aircraft Systems. Bruce P. Selberg and Kamran Rokhsaz, *University of Missouri--Rolla* (**23**, 10, p. 768) Article based on AIAA Paper 85-4071

C86-122 Method for Designing Closed Airfoils for Arbitrary Supercritical Speed Distributions. G. Volpe and R. E. Melnik, *Grumman Corporate Research Center* (**23**, 10, p. 775) Article based on AIAA Paper 85-5023

C86-123 Aerodynamic Design Considerations for Efficient High-Lift Supersonic Wings. David S. Miller and Richard M. Wood, *NASA Langley Research Center* (**23**, 10, p. 783) Article based on AIAA Paper 85-4076

C86-124 Experimental Investigation of Apex Fence Flaps on Delta Wings. Richard A. Wahls, Vess Robert J. and Cary A. Moskovitz, *North Carolina State University* (**23**, 10, p. 789) Article based on AIAA Paper 85-4055

C86-127 Performance Augmentation of a 60-Degree Delta Aircraft Configuration by Spanwise Blowing. A. Seginer and M. Salomon, *Technion--Israel Institute of Technology* (**23**, 11, p. 801) Article

C86-128 Theoretical Prediction of Roll Moment on Wing-Controlled Missile. Sadao Akishita and Ryujiro Kurosaki, *Mitsubishi Electric Corporation, Japan*; Kanzo Okada and Tomoji Hirata, *Mitsubishi Research Institute Inc., Japan* (**23**, 11, p. 808) Article based on AIAA Paper 84-2148

C86-129 Self-Induced Roll Oscillations Measured on a Delta Wing/Canard Configuration. Joseph Katz, *San Diego State University*; and Daniel Levin, *Technion R&D Foundation, Israel* (**23**, 11, p. 814) Article based on AIAA Paper 85-1830 CP857

C86-130 Density Stratification Effects on Wake Vortex Decay. Dan H. Neuhart, George C. Greene, Daie R. Satran and G. Thomas Holbrook, *NASA Langley Research Center* (**23**, 11, p. 820) Article based on AIAA Paper 85-0050

C86-131 Fighter Evasive Maneuvers Against Proportional Navigation Missile. Fumiaki Imado and Susumu Miwa, *Mitsubishi Electric Corporation, Japan* (**23**, 11, p. 825) Article

C86-132 Nonlinear Aerodynamics of a Two-Dimensional Membrane Airfoil with Separation. G. de Matteis and L. de Socio, *Università La Sapienza, Italy* (**23**, 11, p. 831) Article

C86-133 Transonic Separated Solutions for an Augmentor Wing. Jolen Flores and William R. Van Dalsem, *NASA Ames Research Center* (**23**, 11, p. 837) Article based on AIAA Paper 85-5004

C86-134 Measurement and Prediction of Model-Rotor Flowfields. F. Kevin Owen and Michael E. Tauber, *NASA Ames Research Center* (**23**, 11, p. 843) Article based on AIAA Paper 85-1558

C86-135 ADAM, An Aeroservoelastic Analysis Method for Analog or Digital Systems. Thomas Noll, Maxwell Blair and John Cerra, *Air Force Wright Aeronautical Laboratories, Wright-Patterson Air Force Base* (**23**, 11, p. 852) Article based on AIAA Paper 85-3090

C86-136 Equivalent Plate Analysis of Aircraft Wing Box Structures with General Planform Geometry. Gary L. Giles, *NASA Langley Research Center* (**23**, 11, p. 859) Article based on AIAA Paper 86-0940 CP863

C86-137 Circulation Control Airfoils as Applied to Rotary-Wing Aircraft. N. J. Wood, *Stanford University*; and Jack N. Nielsen, *NASA Ames Research Center* (**23**, 12, p. 865) Survey Paper

C86-138 Design and Development of a Power Takeoff Shaft. Domenick J. Gargiulo, *Grumman Aerospace Corporation* (**23**, 12, p. 876) Article based on AIAA Paper 85-4045

C86-139 Navier-Stokes Solution for a Complete Re-Entry Configuration. J. S. Shang and S. J. Scherr, *Air Force Wright Aeronautical Laboratories, Wright-Patterson Air Force Base* (**23**, 12, p. 881) Article based on AIAA Paper 85-1509

C86-140 Dynamic Support Interference in High-Alpha Testing. L. E. Ericsson and J. P. Reding, *Lockheed Missiles & Space Company, Inc.* (**23**, 12, p. 889) Article based on AIAA Paper 86-0760 CP861

C86-141 Unsteady Transonic Flow Calculations for Wing/Fuselage Configurations. John T. Batina, *NASA Langley Research Center* (**23**, 12, p. 897) Article based on AIAA Paper 86-0862 CP863

C86-142 Exploratory Flutter Test in a Cryogenic Wind Tunnel. Stanley R. Cole, *NASA Langley Research Center* (**23**, 12, p. 904) Article based on AIAA Paper 85-0736 CP851

C86-143 Shear Buckling of Composite Cylindrical Panels Considering Material Degradation. A. D. Straw and A. N. Palazotto, *Air Force Institute of Technology, Wright-Patterson Air Force Base* (**23**, 12, p. 912) Engineering Note based on AIAA Paper 86-0879 CP863

C86-144 Full-Potential Circular Wake Solution of a Twisted Rotor Blade in Hover. Hans R. Aggarwal, *Helicopter Aerodynamics and Noise* (**23**, 12, p. 914) Engineering Note

TRANSONIC AERODYNAMICS—v. 81

Edited by David Nixon, Nielsen Engineering & Research, Inc.

Forty years ago in the early 1940s the advent of high-performance military aircraft that could reach transonic speeds in a dive led to a concentration of research effort, experimental and theoretical, in transonic flow. For a variety of reasons, fundamental progress was slow until the availability of large computers in the late 1960s initiated the present resurgence of interest in the topic. Since that time, prediction methods have developed rapidly and, together with the impetus given by the fuel shortage and the high cost of fuel to the evolution of energy-efficient aircraft, have led to major advances in the understanding of the physical nature of transonic flow. In spite of this growth in knowledge, no book has appeared that treats the advances of the past decade, even in the limited field of steady-state flows. A major feature of the present book is the balance in presentation between theory and numerical analyses on the one hand and the case studies of application to practical aerodynamic design problems in the aviation industry on the other.
